Abstract

The Scholarship Management System is a web-based application developed to manage and simplify the scholarship process for students and administrators. The system allows students to register, log in, view available scholarships, check eligibility criteria, upload documents, and apply for scholarships online. Students can also track the status of their applications and receive updates regarding approval, rejection, or pending requests. For administrators, the system provides facilities to manage scholarship details, verify student documents, review applications, and approve or reject requests. It also helps maintain records of students, scholarships, applications, and notifications in an organized manner.

The main purpose of this system is to reduce paperwork, save time, improve transparency, and make the scholarship process faster and easier. The project can be developed using technologies like HTML, CSS, JavaScript, PHP, and MySQL. It is useful for schools, colleges, and organizations that provide scholarships to students.

INTRODUCTION

The Scholarship Management System is a modern web-based application designed to make the scholarship process easier, faster, and more organized. In many schools, colleges, and organizations, scholarship management is still done manually through paper forms and physical document submission. This process takes a lot of time, creates confusion, and increases the chances of errors or loss of data.

The Scholarship Management System solves these problems by providing an online platform where students can register, log in, view available scholarships, check eligibility criteria, upload required documents, and apply from anywhere. Students can also track the status of their applications and receive updates regarding approval or rejection.

For administrators, the system provides tools to manage scholarship records, verify student details, review applications, approve or reject requests, and generate reports. This makes the entire process more transparent and efficient.

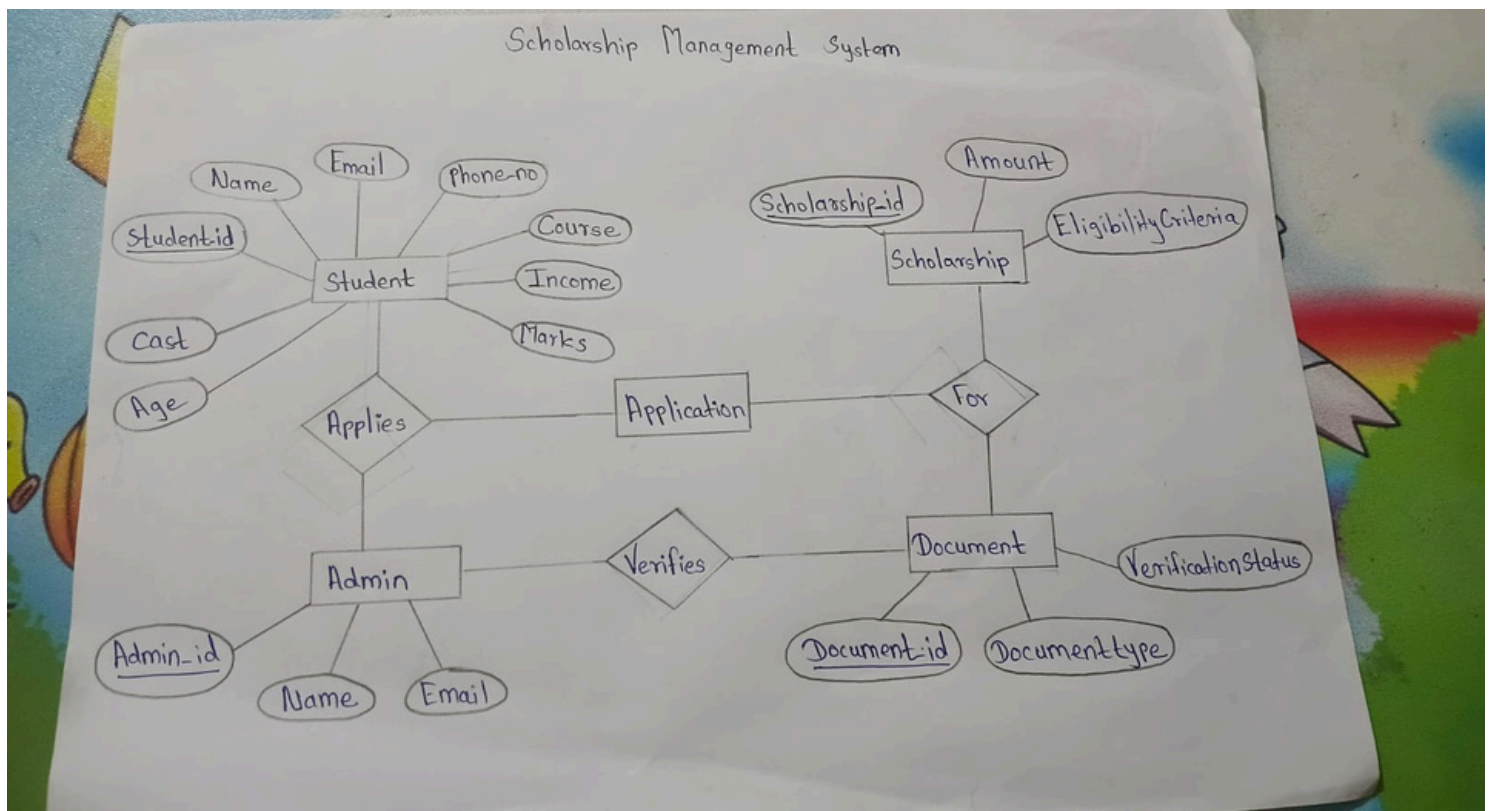

The system is developed using technologies such as HTML, CSS, JavaScript, PHP, and MySQL. The main aim of this project is to reduce manual work, save time, improve accuracy, and provide a user-friendly scholarship application system for both students and administrators.

Required Collection

The following data and documents are required for the Scholarship Management System:

- Student full name
- Date of birth
- Gender
- Mobile number
- Email ID
- Address
- Category or caste
- Family annual income
- Educational qualification
- Course name
- College or school name
- Marks or percentage
- Bank account details
- Aadhaar number

ER/EER DIAGRAM

Reduction of ER Schema to Tables

- One Student can have many Applications
Student_ID → Application.Student_ID
- One Scholarship can have many Applications
Scholarship_ID → Application.Scholarship_ID
- One Student can have one Document record
Student_ID → Document.Student_ID
- One Student can receive many Notifications
Student_ID → Notification.Student_ID
- One Category can contain many Scholarships
Category_ID → Scholarship.Category_ID
- One Student can give many Feedback records
Student_ID → Feedback.Student_ID
- One Admin can manage many Applications
Admin_ID → Application.Admin_ID

Application Table:

Field Name	Data Type	Key
Admin_ID	INT	Foreign Key

Scholarship Table, instead of Category name, use Category_ID as foreign key:

Field Name	Data Type	Key
Category_ID	INT	Foreign Key

Outcome of the Project

The Scholarship Management System helps make the scholarship process easier, faster, and more organized. Students can apply for scholarships online, upload documents, and track their application status without visiting offices repeatedly.

The project reduces paperwork, saves time, improves accuracy, and avoids duplication of records. It also helps administrators manage student data, scholarship details, and application approvals in an efficient way.

The system provides better transparency because students can easily know whether their application is approved, rejected, or pending.

The project can be used in:

Application of the Project

- Schools
- Colleges
- Universities
- Government scholarship departments
- Private organizations
- NGOs
- Educational institutes
- Trusts that provide financial support to students
-

Application of the Project

The project can be used in:
